Sr. MuleSoft Integration Developer

Description

- 4+ years of experience as developer with a focus on enterprise integration platforms using APIs and web services technologies
- 3+ years of experience in developing solution leveraging MuleSoft platform
- Expert knowledge of MuleSoft platform capabilities and architecture with experience of server administration and physical deployment (On Cloud, On Premise and Hybrid)
- Strong knowledge of API design patterns and programming standards
- In depth experience in all aspects of agile software development lifecycle
- Experience mentoring junior level resources, consultants, and clients while leading internal initiatives
- Technically savvy and proven experience in working well in a highly dynamic environment while maintaining strong relationship with stakeholders & teammates
- Work independently to tackle well-scoped and loosely scoped problems
- Flexible and willing to accept a change in priorities as necessary with a strong attention to detail

Responsibilities

- As a Senior MuleSoft Engineer, you will be responsible for following enterprise integration patterns, and developing reusable, endpoint APIs leveraged by our internal and external partners
- Responsible for design, development, testing, documentation, deployment and support of APIs & Integrations leveraging MuleSoft AnyPoint platform
- Ensure the APIs & Integrations follow PSEG's standards for Requirements, Architecture, Design, Code, Test, Deployment and Operational Lifecycle
- Follow good practices and project guidelines in all cases including design, the use of source code control, automated testing and deployment approaches, test-case-based development, and proper documentation practices to ensure solution quality
- Deliver high quality APIs & Integrations that meet acceptance criteria defined
- Test and improve performance of the APIs in terms of response time, reliability and resource usage
- Provide support through problem solving, developing innovative solutions, and leading proactive systems maintenance
- Research latest platform capabilities, develop prototypes to serve as reference for future projects
- Subject matter expert in MuleSoft Platform
- Troubleshoot complex production issues with APIs, identify source of the issue and fix/work with the appropriate team to get the issue fixed
- Continually analyze and innovate to develop assets that improves the overall quality and success of the platform
- Provide technical guidance and mentorship to less experienced employees
